At Wyma we design, manufacture, distribute and service post-harvest vegetable equipment and solutions worldwide. Our product range includes equipment to tip, receive, remove waste, brush, wash, polish, peel, cool, dry, convey, grade, size and pack vegetables as well as complete dry, wash or pre-pack line solutions.

We are an award winning exporter who has gained a reputation for operational excellence, quality and innovative product design. Wyma started out with the invention of the Vege-Polisher back in the early 1990's. It has been a turning point in the international root vegetable industry. However, our business has become so much more than the Vege-Polisher now – we are seeing the demand for full packhouse solutions grow around the world.
